

## Set up Bright Field for Color imaging in Elements

1. Change to the objective you will be imaging/sticking the tissue with
2. Go to White area on slide (no tissue)
3. Under the Color DS-Ri2 Setting tab:
  - a) Click the "AE" button
  - b) Click Auto White
    - Check the "LUTs" window – the red green and blue histograms (little hills) should line up
4. Click the triangle next to "BF" in the OC panel to make the computer remember

Note: Only need to do this once at the beginning of imaging session!
